

The California Health & Safety Code, Title 17 Section §7107, requires all Public Water Systems involved with water treatment to be certified through the California State Water Resources Control Board. It is *highly recommended* that all State Small Water Systems that have a continuous water treatment operation employ a state certified water treatment operator. The following list of water treatment operators currently meets these requirements. This list does not constitute a recommendation of any individual or firm. You may employ any certified water treatment operator to perform the required water treatment operations.
