Best Management Practices and Erosion Control Details Sheet 1
County of Santa Clara

STANDARD BEST MANAGEMENT PRACTICE NOTES
1. Stabilized Construction Entrance/Exit
   - Stabilize construction entrances and exits using erosion control practices such as silt fences, planting, or other stabilization methods before and after use. Ensure all materials are properly disposed of.

2. Silt Fence
   - Construct silt fences at project boundaries to prevent erosion from construction activities. Silt fences should be designed and installed according to local regulations and best management practices.

3. Vehicle and Equipment Wash
   - Ensure that all vehicles and equipment are washed to prevent sediment and debris from being transported off-site. Proper washing and sediment removal practices must be followed to prevent off-site pollution.

4. Stormwater Management
   - Implement effective stormwater management practices to minimize water runoff and prevent erosion. This may include the use of swales, detention basins, or other sediment control measures.

5. Construction Safety
   - Ensure that all construction activities are conducted in a safe manner to prevent accidents and injuries. Proper training and supervision are required for all workers involved in construction activities.

6. Access Control
   - Implement access control measures to prevent unauthorized entry into construction areas. This may include the use of gates, barriers, or other access control devices.

STANDARD EROSION CONTROL NOTES
1. Silt Fence Installation
   - Ensure that silt fences are properly installed and maintained to prevent erosion. Regular inspections and repairs are necessary to maintain the effectiveness of silt fences.

2. Access Control
   - Implement effective access control measures to prevent unauthorized entry into construction areas. Access control devices should be installed and monitored to ensure compliance with erosion control requirements.

3. Stormwater Management
   - Implement effective stormwater management practices to minimize water runoff and prevent erosion. This may include the use of swales, detention basins, or other sediment control measures.

4. Construction Safety
   - Ensure that all construction activities are conducted in a safe manner to prevent accidents and injuries. Proper training and supervision are required for all workers involved in construction activities.

5. Access Control
   - Implement effective access control measures to prevent unauthorized entry into construction areas. Access control devices should be installed and monitored to ensure compliance with erosion control requirements.
