RACCOON HABITAT IMAGE CONCEPT

NATIVE PLANT LIST

- Groundcovers: Creeping thyme, purple needlegrass, dwarf creeping thyme, blackberry
- Shrubs: California NCAA, manzanita, oak, willow, California buckeye
- Native Trees: Ficus, bay, manzanita

RACCOON NARRATIVE

The habitat areas of these enclosures will be designed to maintain and replicate the animal's natural habitat to provide temporary wildlife refuge for species while in care and until release.

- Site enclosures to minimize topographic disturbance
- Preserve large expanses of significant trees with preference given to natives
- Create small zones of human activity for group of enclosures to minimize disturbance to site and animals
- Utilize visual and acoustical vegetative and topographic buffering for enclosures from road and other potential viewpoints

- Keep enclosures as open as possible while providing required visual screening for animals and people
- Small, low impact trails to enclosures
- Materiality and color that blend with surroundings and are visually screened
- Maintain native Toyon, and similar species, that raccoon like and site enclosures nearby
