These maps are subject to revision. The zones shown on this map indicate areas within which the County Geologist may require site specific geologic reports prior to approval of development applications. Local determination services companies should be contacted to resolve the status of parcels that appear to be located at or near zone boundaries. In order to maintain the scale of 1:24,000, this map should be printed on 11x17 paper; otherwise, the graphic scale should be used. NOTE: Although mapped countywide, these Geologic Hazard Zones are not applicable within the city limits of any city or other counties.
These maps are subject to revision. The zones shown on this map indicate areas within which the County Geologist may require site-specific geologic reports prior to approval of development applications. Local determination services companies should be contacted to resolve the status of parcels that appear to be located at or near zone boundaries. In order to maintain the scale of 1:24,000, this map should be printed on 11x17 paper; otherwise, the graphic scale should be used. NOTE: Although mapped countywide, these Geologic Hazard Zones are not applicable within the city limits of any city or other counties.
These maps are subject to revision. These maps are subject to revision. The zones shown on this map indicate areas within which the County Geologist may require site specific geologic reports prior to approval of development applications. Local determination services companies should be contacted to resolve the status of parcels that appear to be located at or near zone boundaries. In order to maintain the scale of 1:24,000, this map should be printed on 11x17 paper; otherwise, the graphic scale should be used. NOTE: Although mapped countywide, these Geologic Hazard Zones are not applicable within the city limits of any city or other counties.
